SUMMARY

Analytical Computer Science and Data Science student skilled in SQL, Excel, data visualization, and business analytics. Experienced in building interactive dashboards and analyzing real-world datasets to identify customer behavior, booking trends, churn factors, and business insights. Familiar with data cleaning, KPI reporting, exploratory data analysis, and communicating findings through project documentation and video explanations.

SKILLS

Programming Languages: Python, SQL, C++

Data Analytics: Data Analysis, Data Cleaning, Exploratory Data Analysis (EDA), KPI Reporting, Data Visualization, Business Analytics

Python Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

Tools & Technologies: Microsoft Excel, Pivot Tables, Excel Dashboards, Power BI, Jupyter Notebook, Git & GitHub

Machine Learning: Supervised Learning And Unsupervised Learning, Feature Engineering, Model Evaluation, Cross-Validation, XGBoost and Gradient Boosting

Database: MySQL

Statistics & Analytical Concepts: Hypothesis Testing, A/B Testing, Statistical Significance, Predictive Modeling, Customer Churn Analysis

WORK EXPERIENCE

Telecom Churn Analysis Dashboard | SQL, Microsoft Excel

- Developed an interactive customer churn dashboard using Excel slicers, Pivot Tables, and KPI metrics.
- Analyzed customer churn behavior, retention trends, and service-related factors affecting customer loss.
- Solved 20+ real-world business questions using SQL queries and analytical techniques.
- Published detailed project explanation videos on YouTube to communicate dashboard insights and business findings effectively.

Project Explanation: [YouTube Link](#)

Hotel Booking Analysis Dashboard | SQL, Microsoft Excel

- Analyzed hotel booking datasets to identify booking trends, lead time behavior, ADR patterns, and cancellation factors.
- Built interactive Excel dashboards using Pivot Tables and KPI metrics for business reporting and trend analysis.
- Performed SQL-based data analysis to answer business-focused questions related to customer behavior and booking cancellations.
- Identified customer segments with higher cancellation probability using analytical and visualization techniques.

Project Explanation: [YouTube Link](#)

Credit Card Customer Insights | Python, Scikit-learn, Pandas

The objective of this project is to analyze the credit card dataset to understand patterns and trends among users. This includes exploring demographics, credit limits, and customer segments to identify factors that influence credit behavior.

EDUCATION

Bachelor of Technology in Computer Science and Engineering (Data Science)

Quantum University , Roorkee | 2024 – 2028 | CGPA: 8.69
